

CLAIMS

1. Flexible mould for confectionery and bread-making, comprising a silicone tray with an outwards projecting edge, characterised by the fact to provide a support element applied to said edge to give the mould a
5 certain resistance, such as to avoid any deformation under the strain of the content.
2. Flexible mould according to claim 1, characterised by the fact that the support is dipped into silicone.
3. Flexible mould according to claim 2, characterised by the fact that the
10 support element is dipped into the silicone near the peripheral portion of the edge.
4. Flexible mould according to claim 3, characterised by the fact that said support element is formed by a threadlike metallic element.
5. Flexible mould according to claim 1 wherein said support element is
15 formed by a plastic element applied to the tray.
6. Flexible mould according to claim 5 wherein said frame is co-stamped with the tray.
7. Flexible mould for confectionery and bread-making according to claim 1, wherein said frame is inserted into a seat provided in the silicone edge.
- 20 8. Flexible mould for confectionery and bread-making according to claim 7, characterized in that said frame is inserted into a seat provided in the lower part of the edge, and wherein the outer part of the edge overlaps at least part of said frame.
